

Problem 1: Result list incorrectly shows the old name after a file is renamed.

Contents of a test folder and a "Find Files" result list:

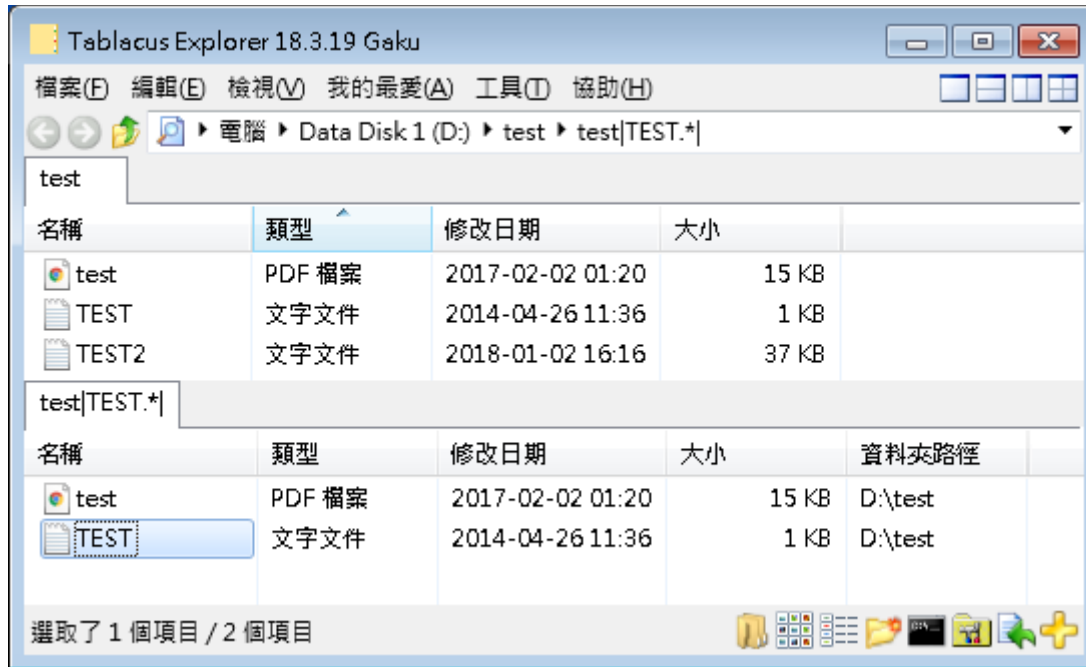

Press F2 to rename TEST.txt to newname.txt in the result list.

The file is successfully renamed. However the result list shows the old name as if the rename were unsuccessful.

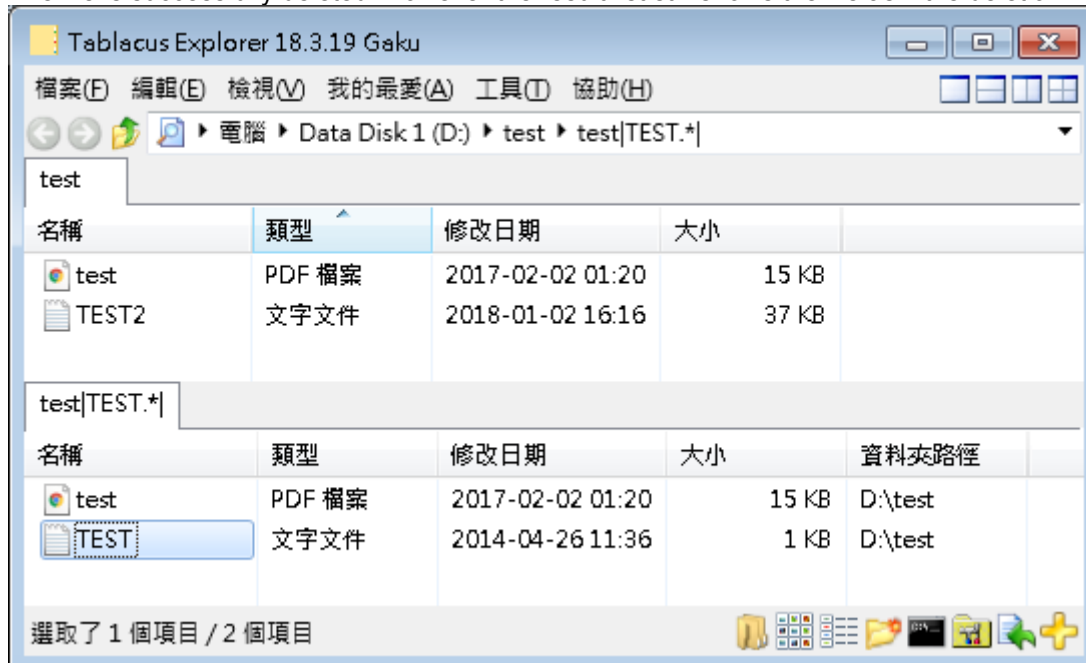

Problem 2: Result list incorrectly keeps a deleted file.

Contents of a test folder and a "Find Files" result list:

Press Delete key and reply Yes to delete TEST.txt

The file is successfully deleted. However the result list still shows the file as if the deletion were unsuccessful.

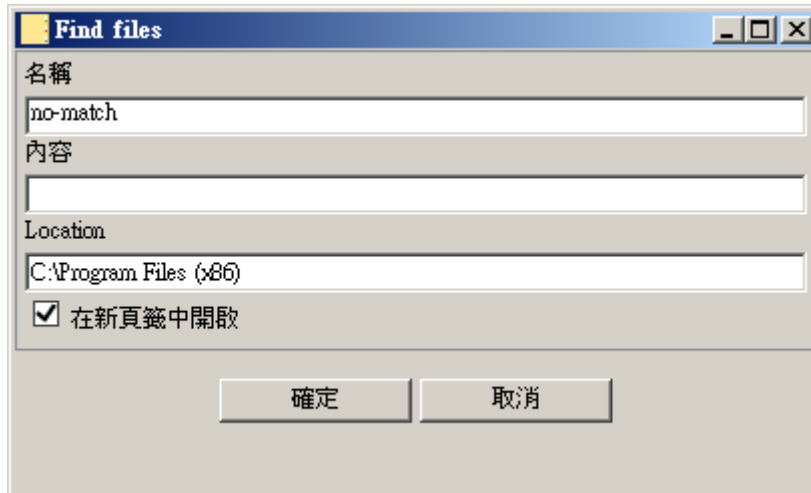

Problem 3: TE window unexpectedly becomes inactive if a progress window shows during the search

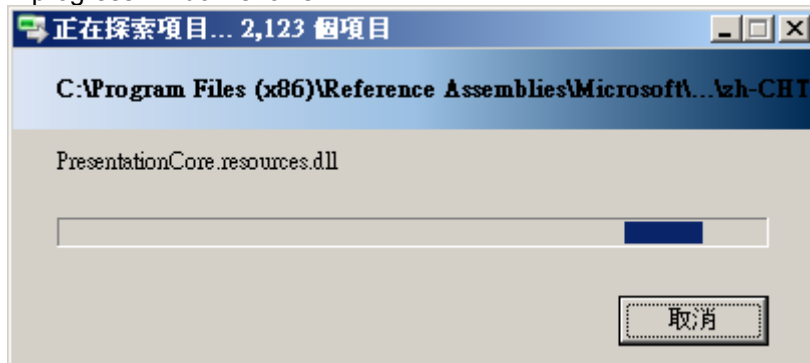

Test this case with a large folder (over 2000 files)

Press F3 to search

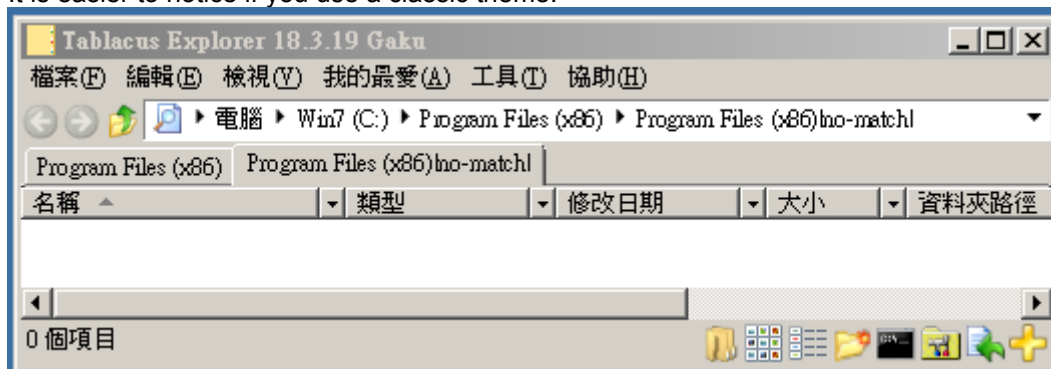

A progress window shows.

TE window becomes inactive when the search finishes.

It is easier to notice if you use a classic theme.

Most users may not notice with an Aero theme. They may try to use a hot key without success, before they click the TE window. This causes a bit confusion and inconvenience.

"Empty folder" add-on has the same problem.
