

## TE 18.4.5 pane activation problem

“Windows” is in the active pane.

Click the file list of “Tablacus Explorer”. The pane can be activated but need to wait for a while.

**The activation should be instant.**

The same problem occurs under the following cases:

1. hover the mouse pointer on a file list and scroll
2. click the tab area
3. use “Switch to next pane” add-on to switch panes
