TE 18.4.5 pane activation grace period
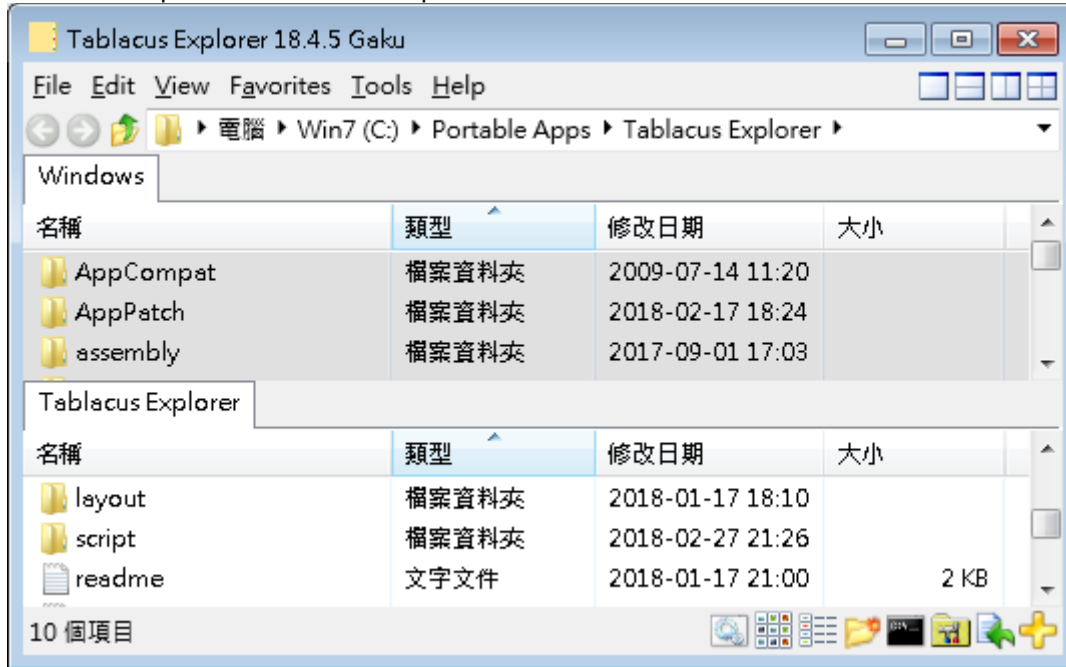

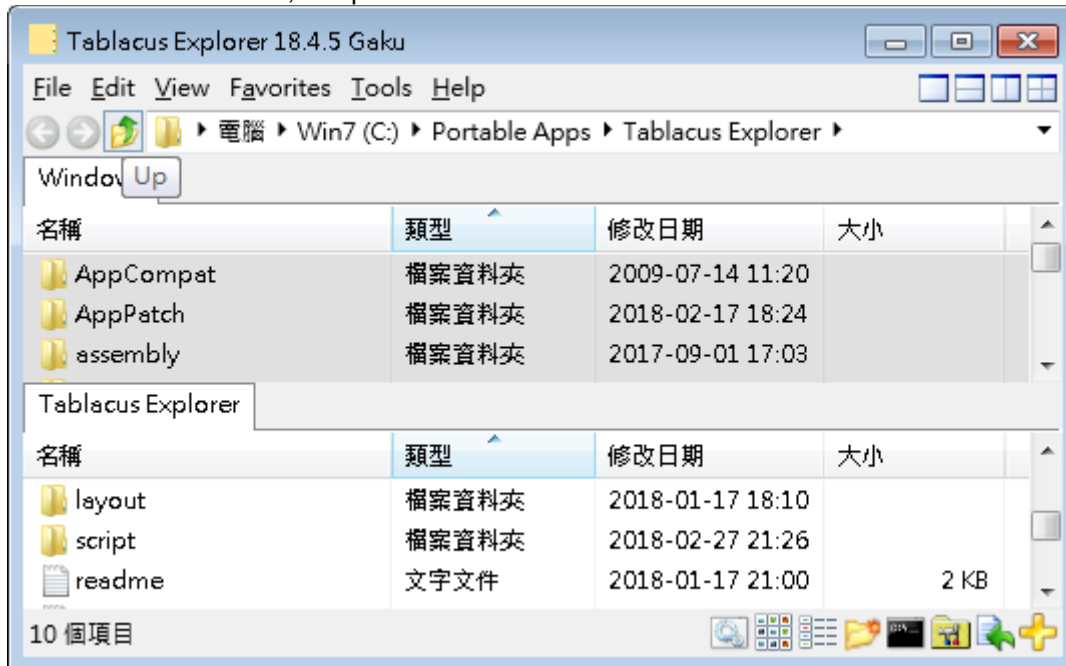

"Tablacus Explorer" is in the active pane.

Move the mouse pointer to the tool bar (fly over "Windows" tab). On TE 18.3.30 and earlier, "Windows" tab would be accidentally activated. On TE 18.4.5, this problem is solved.

But a side effect is that if the user really wants to activate the "Windows" tab by pointing to an item, the waiting time will be too long.

Therefore the waiting time (grace period) should be customizable somewhere in "Tools > Options".
Suggested default will be around 100 to 200 milliseconds.
